INTRODUCTION

Accident at the workplace well recognised for the direct effect they have on productivity. Loss of productive time due to accidents, fortunately preventable with proper training. However, should accident still happen despite this, then proper initial handling of the accident victim can contribute significantly to the outcome of the victim. Basic skill in handling common injuries thus important in any organisation. Basic life skill like CARDIOPULMONARY RESUSCITATION (CPR) should be learnt by everybody especially in this age and time where heart disease, due to affluent lifestyle, have emerged as the leading killer in our country Malaysia.

COURSE OBJECTIVES

Upon completion of the training, successful participants will be able to;

- Assess the situation of a casualty and determine the priority of treatment
- Identify the disease or condition of a casualty and make a primary diagnosis
- Demonstrate the ability to apply immediate, appropriate and adequate initial management to a casualty
- Ensure the need for and exercising of caution when handling or moving a casualty accordingly to the patient's condition and level of injuries sustained
- Demonstrate and ensure the use of recognised resuscitation techniques.
